

# The Dragon Tangram

A Tangram is a very old puzzle.

A square is cut into 7 smaller shapes.

**What are the new shapes?**

**Which shapes have parallel lines?**

**Which shapes have perpendicular lines?**

**Which shapes have lines of symmetry?**

**What is the same and what is different about the shapes?**

**How can you sort them? Find 2 different ways.**

**Parallel lines – are always the same distance apart**

**Perpendicular line – a line at a right angle to another line.**

**Cut out the 7 tangram pieces (above). Arrange them into this dragon.**

**There is more than one way to solve the puzzle.**
