

**9** Take your child to the toilet with you and allow them to see. Talk about what you are doing. This reduces fear and allows them to feel more comfortable in using the toilet as they see you doing it.

**10** Take them to buy their own potty, underwear, step and toilet seat. They may like to decorate their potty with stickers too! Some children may prefer to use the toilet straight away instead of the potty. This is ok too.

**11** When your child has used the potty, take them with you to dispose of the contents down the toilet. This will allow them to understand this is where the wee and poo goes.

WE CHANGE LIVES BY TRANSFORMING HEALTH AND CARE

## **Lancashire 0-19 Healthy Young People and Families Service**

### **Preparing for School Toilet Training**

## Ready, Set, Go

It is such an exciting time for children about to start their new school. Getting them prepared with independent toileting gives them a head start to their school life.

## Showing Signs

- 1 Is your child able to hold their wee for 1.5-2 hour's?
- 2 Showing signs of wanting to remove nappy?
- 3 Vocalising they have had a wee or poo?
- 4 Is your child asking questions about toileting?
- 5 Is your child hiding when they are going for a poo in their nappy?
- 6 Passing stools 4+ times weekly?
- 7 Look for signs that your child is needing to wee or poo. Are they squirming, jumping, squeezing their nappy or pulling funny faces?

## Things you can do

1 Plenty of fluids- This encourages the bladder to stretch and fill effectively. Restricting fluids is not going to reduce wet accidents it will in fact make them worse. Water, pale sugar free cordial and non-caffeinated drinks are recommended.

2 Begin all nappy changes in the bathroom and keep all clean nappies, wipes and underwear there too.

3 Place 2 sheets of kitchen towel (folded in half) inside your child's nappy. This enables them to feel that they are wet when they have had a wee.

4 **Be Prepared-** Buy a step stool and toilet seat that your child can independently use to get on and off the toilet. Buy plenty of underwear and pants easy to pull down (tracksuit bottoms/leggings) accidents will happen at first. Have a potty available in each room for quick access.

5 **Be Brave-** Get your child into underwear as soon as possible. Pull ups are the same as nappies and does not allow a child to feel wet.

6 Practice getting on and off the seat while your child has clothing on, then gradually remove clothing to the knees. Your child does not have to do something every time, we want them to feel comfortable sitting on the toilet. Praise after every time they sit on the toilet even if they haven't done anything.

7 Sit and sing songs, read stories and blow bubbles or tissue paper. Blowing helps relax the bowels and aids in passing stools along with a healthy diet of fiber, fruit and vegetables to keep our gut healthy.

8 Use a regular toilet routine. Encourage to sit on the toilet 20 minutes after meals. This is when the digestive system wakes up and it is more likely for your child to poo.
